EDUCATION (expected graduation May 2024)

SUNY COLLEGE AT PLATTSBURGH Bachelor of Science in Computer Science, minor in Web Design/Programming

Coursework: Data structure and algorithms, operating system, object-oriented design and programming, project management, Database and web application, software engineering, discrete math, linear algebra, UNIX/LINUX

TECHNICAL SKILLS

- **Programming Languages:** Python, Javascript, HTML, CSS, SQL,
- **Technologies/Software/Frameworks:** React, Git, MySQL, VSCode, Android Studio, React Native

PROJECTS

'Can't Cook' Android and iOS application | *Python, Flutter, Dart*

-Led a team of 5 in conceiving and developing the 'Can't Cook' mobile application, a project blending technology and culinary exploration

- **Team Leadership:** Orchestrated the collaborative efforts of a diverse team, ensuring a cohesive approach to meet project objectives.
- **Machine Learning Integration:** Applied machine learning techniques using deep learning to create a model that is capable of recognizing numerous raw food ingredients.
- **Local Backend Server Development:** Established a robust local backend server using Python and Flask, facilitating secure communication between the frontend application and backend processes.
- **Flutter UI Design:** Designed an intuitive user interface using Flutter, contributing to a visually appealing and user-friendly experience.
- **Efficient Backend Communication:** Implemented HTTPS requests for smooth communication between the frontend and backend, optimizing data exchange for image processing and recipe retrieval.

Bathroom Finder | *React, Javascript, Python, MySQL, Google Cloud, Flask, CSS*

Personal Project

-Developed a web application to locate the nearest public bathroom, enhancing convenience for travelers and individuals in unfamiliar locations.

- **Frontend:** Engineered a responsive, user-friendly interface using React, coupled with CSS for optimal presentation across various devices.
- **Backend:** Implemented a Flask-powered backend for API integration, fetching real-time bathroom locations and user reviews.
- **Navigation:** Utilized Google Cloud APIs for location search autocomplete, map navigation, and user location services.

Space Station Tracker and weather display | *Javascript, HTML, CSS*

Personal Project

- Developed a web application utilizing HTML and CSS to present a real-time visual tracking of the International Space Station (ISS) alongside weather updates at its current location.
- Integrated data from a Space Station Tracking API and a Weather API using JavaScript, enabling dynamic content updates in response to ISS location changes.

WORK EXPERIENCE

Desktop Support Technician

SUNY PLATTSBURGH Computer Science Department

September 2021 – Present

- *Work with a team and coordinate with supervisors to solve desktop and software issues of students and faculty.*
- *Provide technical support to students and faculty, demonstrating keen problem-solving abilities and a commitment to providing efficient solutions.*
